

## AMENDMENTS TO THE CLAIMS

1           1.       (Currently Amended) A method, employing a browser in data communication  
2 over a network with a server, for determining a price of a product, said server having a plurality  
3 of addresses in an address space associated therewith, said method comprising:  
4           displaying information concerning said product in a browser window, said information  
5           including a first offered price data of said product;  
6           agreeing to said first offered price data by transmitting product-related information to the  
7           server for storage in a subportion of said plurality of server addresses, wherein  
8           said transmitted product-related information includes said first offered price data  
9           of the product and wherein the subportion of said plurality of server addresses is  
10           associated with an identification code corresponding to a user of the browser,  
11           wherein the agreed to offered price data defines agreed price data; and  
12           changing said agreed price data of said product to a second offered price data of said  
13           product in response to an event.

1           2.       (Previously Presented) The method as recited in claim 1 wherein said event is a  
2 predetermined event that includes expiration of a preset amount of time.

1           3.       (Previously Presented) The method as recited in claim 1 wherein said event is a  
2 predetermined event that includes disassociating said information from said subportion of said  
3 plurality of addresses.

1           4.       (Original) The method as recited in claim 1 wherein said information corresponds  
2 to characteristics of an automobile.

1           5.       (Original) The method as recited in claim 1 wherein said information corresponds  
2 to characteristics associated with an automobile, and said changing said agreed price comprises:  
3           varying said characteristics.

1           6.       (Previously Presented) The method as recited in claim 2 wherein said preset time  
2 is in a range of one to ten days.

1           7.       (Previously Presented) The method as recited in claim 1 wherein said first  
2 offered price data includes information includes taxes associated with a geographic region and a  
3 manufacture's suggested retail price(MSRP), and said changing said agreed price data  
4 comprises:  
5           varying said MSRP independently of said taxes.

1           8.       (Currently Amended) A computer system comprising:  
2 a processor, configured to operate a browser;  
3 a network interface, coupled to said processor and coupled to a server via a network,  
4           wherein said network interface permits said browser to be in data communication  
5           over said network with said server and said server has a plurality of addresses in  
6           an address space associated therewith;  
7 computer readable medium coupled to said processor; and  
8 computer code, encoded in said computer readable medium, for determining a price of a  
9 product by virtue of being configured to cause said processor to:  
10 display information concerning said product in a browser window, said display  
11 information including first offered price data of said product; and  
12 permit agreement to said first offered price data by transmitting product-related  
13 information to the server for storage in a subportion of said plurality of  
14 server addresses, wherein said transmitted product-related information  
15 includes said first offered price data of the product and wherein the  
16 subportion of said plurality of server addresses is associated with an  
17 identification code corresponding to a user of the browser, wherein the  
18 agreed to offered price data defines agreed price data of said product and  
19 said agreed price data changes to second offered price data of said product  
20 in response to an event.

1           9.       (Previously Presented) The computer system as recited in claim 8 wherein said  
2 event is a predetermined event that includes expiration of a preset amount of time.

1           10.   (Previously Presented) The computer system as recited in claim 8 wherein said  
2 event is a predetermined event that includes disassociating said information from said subportion  
3 of said plurality of addresses.

1           11.   (Original) The computer system as recited in claim 8 wherein said information  
2 corresponds to characteristics of an automobile.

1           12.   (Original) The computer system as recited in claim 8 wherein said information  
2 corresponds to characteristics associated with an automobile, and said computer code configured  
3 to cause said processor to change said agreed price is further configured to cause said processor  
4 to:  
5           vary said characteristics.

1           13.   (Previously Presented) The computer system as recited in claim 9 wherein said  
2 preset amount of time is in a range of one to ten days.

1           14.   (Previously Presented) The computer system as recited in claim 8 wherein said  
2 first offered price data includes information includes taxes associated with a geographic region  
3 and a manufacture's suggested retail price(MSRP), and said computer code configured to cause  
4 said processor to change said agreed price data is further configured to cause said processor to:  
5           vary said MSRP independently of said taxes.

1           15.   (Currently Amended) A computer program ~~product~~ storage medium for operation  
2 on a server computer system in data communication over a network with at least one client  
3 computer system employing a browser application, the computer program product comprising  
4 code for determining a price of a product, said server computer system having a plurality of  
5 addresses in an address space associated therewith, said computer ~~product~~ program storage  
6 medium comprising:  
7           for each client computer system:

8 code to provide display information to said browser application concerning said  
9 product, said display information including a first offered price data of  
10 said product;  
11 code to associate a subportion of said plurality of server addresses with an  
12 identification code corresponding to said client system;  
13 code to receive product-related information from said client computer system  
14 indicating an acceptance of said first offered price data, wherein said  
15 received product-related information includes said first offered price data  
16 of the product;  
17 code to store said product-related information in said subportion of said plurality  
18 of server addresses, wherein the accepted offered price defines agreed  
19 price data; and  
20 code to change said agreed price data of said product to second offered price data  
21 of said product in response to an event.

1 16. (Currently Amended) The computer program ~~product~~ storage medium as recited  
2 in claim 15 wherein event is a predetermined event that includes expiration of a preset amount of  
3 time

1 17. (Currently Amended) The computer program ~~product~~ storage medium as recited  
2 in claim 15 wherein said event is a predetermined event that includes disassociating said  
3 information from said subportion of said plurality of addresses.

1 18. (Currently Amended) The computer program ~~product~~ storage medium as recited  
2 in claim 15 wherein said information corresponds to characteristics of an automobile.

1 19. (Currently Amended) The computer program ~~product~~ storage medium as recited  
2 in claim 15 wherein said information corresponds to characteristics associated with an  
3 automobile, and said code that changes said agreed price data comprises:  
4 code to vary said characteristics.

1           20.   (Currently Amended) The computer program ~~product~~ storage medium as recited  
2 in claim 16 wherein said preset amount of time is in a range of one to ten days.

1           21.   (Currently Amended) The computer program ~~product~~ storage medium as recited  
2 in claim 15 wherein said first offered price data includes information includes taxes associated  
3 with a geographic region and a manufacture's suggested retail price (MSRP), and said code that  
4 changes said agreed price data comprises:  
5           code to vary said MSRP independently of said taxes.

1           22.   (Currently Amended) An apparatus, employing a browser in data communication  
2 over a network with a server, for determining a price of a product, said server having a plurality  
3 of addresses in an address space associated therewith, said method comprising:  
4           means for displaying information concerning said product in a browser window, said  
5                   information including a first offered price data of said product;  
6           means for agreeing to said first offered price data by transmitting product-related  
7                   information to the server for storage in a subportion of said plurality of server  
8                   addresses, wherein said transmitted product-related information includes said first  
9                   offered price data of the product and wherein the subportion of said plurality of  
10                  server addresses is associated with an identification code corresponding to a user  
11                  of the browser, wherein the agreed to offered price data defines agreed price data;  
12                  and  
13           means for changing said agreed price data of said product to second offered price data of  
14                  said product in response to an event.

1           23.   (Previously Presented) The apparatus as recited in claim 22 wherein said event is  
2 a predetermined event that includes expiration of a preset amount of time.

1           24.   (Previously Presented) The apparatus as recited in claim 22 wherein said event is  
2 a predetermined event that includes disassociating said information from said subportion of said  
3 plurality of addresses.

1           25.    (Original) The apparatus as recited in claim 22 wherein said information  
2 corresponds to characteristics of an automobile.

1           26.    (Previously Presented) The apparatus as recited in claim 23 wherein said  
2 information corresponds to characteristics associated with an automobile and said means for  
3 changing said agreed price data comprises:  
4           means for varying said characteristics.

1           27.    (Previously Presented) The apparatus as recited in claim 23 wherein said preset  
2 amount of time is in a range of one to ten days.

1           28.    (Previously Presented) The apparatus as recited in claim 22 wherein said first  
2 offered price data comprises information includes taxes associated with a geographic region and  
3 a manufacture's suggested retail price(MSRP), and said means for changing said agreed price  
4 data comprises:  
5           means for varying said MSRP independently of said taxes.

1           29.    (Canceled).

1           30.    (Canceled).

1           31.    (Canceled).

1           32.    (Canceled).

1           33.    (Canceled).

1           34.    (Canceled).

1           35.    (Previously Presented) The method as recited in claim 1 wherein said event  
2 corresponds to a change in a specification of said product.

1           36.   (Previously Presented) The computer system as recited in claim 8 wherein said  
2 event corresponds to a change in a specification of said product.

1           37.   (Previously Presented) The computer program product as recited in claim 15  
2 wherein said event corresponds to a change in a specification of said product.

1           38.   (Previously Presented) The apparatus as recited in claim 22 wherein said event  
2 corresponds to a change in a specification of said product.

1           39.   (Currently Amended) A method of operating a server computer system for  
2 determining a price of a product, said server computer system having a plurality of addresses in  
3 an address space associated therewith and said server computer system is in data communication  
4 over a network with at least one client system employing a browser application, the method  
5 comprising:

6           for each client computer system:

7               providing display information to said browser application concerning said  
8               product, said information including a first offered price data of said  
9               product;

10           associating a subportion of said plurality of server addresses with an identification  
11           code corresponding to said client system;

12           receiving product-related information from said client computer system indicating  
13           an acceptance of said first offered price data, wherein said received  
14           product-related information includes said first offered price data of the  
15           product and;

16           storing said received product-related information in said subportion of said  
17           plurality of server addresses, wherein the accepted offered price defines  
18           agreed price data; and

19           changing said agreed price data of said product to second offered price data of  
20           said product in response to an event.

1           40.   (Previously Presented) The method as recited in claim 39 wherein event is a  
2 predetermined event that includes expiration of a preset amount of time

1           41.   (Previously Presented) The method as recited in claim 40 wherein said preset  
2 amount of time is in a range of one to ten days.

1           42.   (Previously Presented) The method as recited in claim 39 wherein said event is a  
2 predetermined event that includes disassociating said information from said subportion of said  
3 plurality of addresses.

1           43.   (Previously Presented) The method as recited in claim 39 wherein said  
2 information corresponds to characteristics of an automobile.

1           44.   (Previously Presented) The method as recited in claim 39 wherein said  
2 information corresponds to characteristics associated with an automobile, and said code that  
3 changes said agreed price data comprises:  
4 code to vary said characteristics.

1           45.   (Previously Presented) The method as recited in claim 39 wherein said first  
2 offered price data includes information includes taxes associated with a geographic region and a  
3 manufacture's suggested retail price(MSRP), and said code that changes said agreed price data  
4 comprises:  
5 code to vary said MSRP independently of said taxes.

1           46.   (Previously Presented) The method as recited in claim 39 wherein said event  
2 corresponds to a change in a specification of said product.

1           47.   (Previously Presented) The method as recited in claim 1 wherein agreement to  
2 said price is effected by storing said product-related information in said subportion of said  
3 addresses associated with said server.

1           48.   (Previously Presented) The computer system as recited in 8 wherein agreement to  
2 said price is effected by storing said product-related information in said subportion of said  
3 addresses associated with said server.

1           49.   (Currently Amended) The computer program ~~product~~ storage medium as recited  
2 in claim 15 wherein agreement to said price is effected by storing said product-related  
3 information in said subportion of said addresses associated with said server.

1           50.   (Previously Presented) The apparatus as recited in claim 22 wherein agreement to  
2 said price is effected by storing said product-related information in said subportion of said  
3 addresses associated with said server.

1           51.   (Previously Presented) The method of claim 39 wherein agreement to said price  
2 is effected by storing said product-related information in said subportion of said addresses  
3 associated with said server.
